## K400

### Anti-icing technology for pneumatic equipment

The K400 anti-freeze lubricant can help reduce expensive downtime and ensure the effective operation of pneumatic equipment in the harshest of environments.

### High Performance

Due to its ability to mix with water, the K400 is ideal for water well drilling, as it washes out of the hole with the first rush of water. The K400 is not an additive but is a very high quality extreme pressure synthetic lubricant.

- Absorbs up to 4 times its own weight in water
- Water soluble
- Biodegradable
- Tested at pressures up to 17 bar
- Pour point of -60°C

### Reliability

The K400 works by absorbing water or condensation in the air, depressing the freezing point of the solution formed, thus eliminating freezing. It maintains high extreme pressure properties, unlike normal oils whose qualities deteriorate rapidly when water is present.

### Logistics

Our global support coverage means we can be there where you need us when you need us, delivering on time against the odds.

### Customer Support

Kilfrost's 75 years of experience can support you with our technical expertise to offer you the right product.

### Quality you can trust

Five-star products are at our heart and we are proud of our reputation for continually raising the benchmark through innovation.
